Profile

Computer Science Engineering graduate with hands-on experience in Python, Flask, Machine Learning, Computer Vision, REST APIs, and AI-enabled application development. Built Python-based projects including an IPL score prediction application and a real-time collision alert system using YOLOv8, OpenCV, and PyTorch. Strong foundation in OOP, data structures, algorithms, SQL, and software development, with a passion for AI and emerging technologies.

Education

Bachelor of Technology (CSE), Kalasalingam University
Virudhunagar, Tamil Nadu

2022 - 2026

CGPA: 7.8

Class XII, Chaitanya junior college
Guntur, Andhra Pradesh

2020 - 2022

Percentage: 88.3%

Skills

- **Programming Languages:** Python, Java.
- **Core:** OOP, Data Structures, Algorithms.
- **Web/Backend:** HTML, CSS, React, Flask, REST APIs.
- **Database:** MySQL, DBMS.
- **Machine Learning:** scikit-learn, Pandas, OpenCV, PyTorch, YOLOv8.
- **Tools:** Git, GitHub, VS Code, Power BI, Excel.

Projects

AI Travel Companion – NeverASolo — React, Flask/REST APIs, Firebase

- Developed a modern travel planning platform focused on Indian destinations with multilingual accessibility support.
- Built trip creation workflows, personalized itinerary planning, and responsive UI components for mobile and desktop users.
- Integrated scalable API-driven architecture and designed the application for future AI-based travel recommendations.
- **GitHub:** github.com/Rjendra27/trip-together | **Live Demo:** trip-together-1.vercel.app

IPL Score Prediction — Python, Flask, scikit-learn

- Developed a Python-based Flask web application to predict IPL innings scores based on match conditions.
- Preprocessed historical IPL datasets and trained a Random Forest Regressor for score prediction.
- Integrated the trained ML model with the Flask backend to generate real-time predictions.
- **GitHub:** github.com/Rjendra27/ipl-score-prediction

Collision Alert System – Computer Vision for Vehicle Safety — Python, YOLOv8, OpenCV, PyTorch

- Developed a real-time computer vision application using Python, YOLOv8, and OpenCV for object detection and vehicle safety.
- Implemented object tracking, distance estimation, and trajectory analysis to identify potential collision risks.
- Applied Dynamic ROI processing and angular analysis to improve detection accuracy and real-time performance.
- **GitHub:** github.com/Rjendra27/Collision-Alert-System

Certificates

- **DBMS | DAA | Hackathon** (CodeChef Certified)
